

Soil moisture & temperature recorder - alarm

"Agribun", records temperature and soil's moisture in short intervals and upload the records for your access on a web-based application. The web application sends out email and text message (SMS) notifications if any of the pre-defined temperature or moisture levels exceed or fall below your adjustable defined limits. With "Agribun", crucial environmental conditions are constantly monitored, well documented and quality of final product guaranteed as expected.

Key features

- Easy installation
- 24/7 Nighttime-daytime recording soil temperature and moisture
